

Token Ring Overview

- Examples
 - 16Mbps IEEE 802.5 (based on earlier IBM ring)
 - 100Mbps Fiber Distributed Data Interface (FDDI)

Jan-29-03

4/598N: Computer Networks

1

Token Ring (cont)

- Idea
 - Frames flow in one direction: upstream to downstream
 - special bit pattern (token) rotates around ring
 - must capture token before transmitting
 - release token after done transmitting
 - immediate release
 - delayed release
 - remove your frame when it comes back around
 - stations get round-robin service

Frame Format

Jan-29-03

4/598N: Computer Networks

2

Timed Token Algorithm

- Token Holding Time (THT)
 - upper limit on how long a station can hold the token
- Token Rotation Time (TRT)
 - how long it takes the token to traverse the ring.
 - $TRT \leq \text{ActiveNodes} \times THT + \text{RingLatency}$
- Target Token Rotation Time (TTRT)
 - agreed-upon upper bound on TRT

Jan-29-03

4/598N: Computer Networks

3

Algorithm (cont)

- Each node measures TRT between successive tokens
 - if measured-TRT > TTRT: token is late so don't send
 - if measured-TRT < TTRT: token is early so OK to send
- Two classes of traffic
 - synchronous: can always send
 - asynchronous: can send only if token is early
- Worse case: $2 \times TTRT$ between seeing token
- Back-to-back $2 \times TTRT$ rotations not possible

Jan-29-03

4/598N: Computer Networks

4

Token Maintenance

- Lost Token
 - no token when initializing ring
 - bit error corrupts token pattern
 - node holding token crashes
- Generating a Token (and agreeing on TTRT)
 - execute when join ring or suspect a failure
 - send a claim frame that includes the node's TTRT bid
 - when receive claim frame, update the bid and forward
 - if your claim frame makes it all the way around the ring:
 - your bid was the lowest
 - everyone knows TTRT
 - you insert new token

Jan-29-03

4/598N: Computer Networks

5

Maintenance (cont)

- Monitoring for a Valid Token
 - should periodically see valid transmission (frame or token)
 - maximum gap = ring latency + max frame $\leq 2.5\text{ms}$
 - set timer at 2.5ms and send claim frame if it fires

Jan-29-03

4/598N: Computer Networks

6

Outline

- Wireless networks
 - 802.11
 - Infra-red Irda
 - Bluetooth

Jan-29-03

4/598N: Computer Networks

7

Wireless LANs

- IEEE 802.11
 - Bandwidth: 1 or 2 Mbps
 - 802.11b - 11 Mbps (2.4 GHz)
 - 802.11g - 54 Mbps (2.4 GHz)
 - 802.11a - 54 Mbps (5 GHz)
- Physical Media
 - spread spectrum radio (2.4 GHz)
 - diffused infrared (10 m)

Jan-29-03

4/598N: Computer Networks

8

Spread Spectrum

- Idea
 - spread signal over wider frequency band than required
 - originally designed to thwart jamming
- Frequency Hopping
 - transmit over random sequence of frequencies
 - sender and receiver share...
 - pseudorandom number generator
 - seed
 - 802.11 uses 79 x 1MHz-wide frequency bands

Jan-29-03

4/598N: Computer Networks

9

Spread Spectrum (cont)

- Direct Sequence
 - for each bit, send XOR of that bit and n random bits
 - random sequence known to both sender and receiver
 - called n-bit chipping code
 - 802.11 defines an 11-bit chipping code

Jan-29-03

4/598N: Computer Networks

10

Challenges

- Limited wireless transmission range
- Broadcast nature of the wireless medium
 - Hidden terminal problem
- Packet losses due to transmission errors
- Mobility-induced route changes
- Mobility-induced packet losses
- Battery constraints
- Potentially frequent network partitions
- Ease of snooping on wireless transmissions (security hazard)

Nitin Vaidya @ UIUC

Jan-29-03

4/598N: Computer Networks

11

Collisions Avoidance

- Similar to Ethernet
- Problem: hidden and exposed nodes

Jan-29-03

4/598N: Computer Networks

12

Hidden Terminal Problem

- Node B can communicate with A and C both
- A and C cannot hear each other
- When A transmits to B, C cannot detect the transmission using the *carrier sense* mechanism
- If C transmits, collision will occur at node B

Nitin Vaidya @ UIUC

Jan-29-03

4/598N: Computer Networks

13

RTS/CTS Handshake

- Sender sends Ready-to-Send (RTS)
- Receiver responds with Clear-to-Send (CTS)
- RTS and CTS announce the duration of the transfer
- Nodes overhearing RTS/CTS keep quiet for that duration
- RTS/CTS used in IEEE 802.11

Nitin Vaidya @ UIUC

Jan-29-03

4/598N: Computer Networks

14

Multiple Access Collision Avoidance – Wireless (MACAW)

- Sender transmits RequestToSend (RTS) frame
- Receiver replies with ClearToSend (CTS) frame
- Neighbors...
 - see CTS: keep quiet
 - see RTS but not CTS: ok to transmit
- Receiver sends ACK when has frame
 - neighbors silent until see ACK
- Collisions
 - no collisions detection
 - known when don't receive CTS
 - exponential backoff

Jan-29-03

4/598N: Computer Networks

15

Supporting Mobility

- Case 1: ad hoc net working
- Case 2: access points (AP)
 - tethered
 - each mobile node associates with an AP

Jan-29-03

4/598N: Computer Networks

16

Mobility (cont)

- Scanning (selecting an AP)
 - node sends Probe frame
 - all AP's w/in reach reply with ProbeResponse frame
 - node selects one AP; sends it AssociateRequest frame
 - AP replies with AssociationResponse frame
 - new AP informs old AP via tethered network
- When
 - active: when join or move
 - passive: AP periodically sends Beacon frame

Jan-29-03

4/598N: Computer Networks

17

irda

- Infrared Data Association – Point and Shoot Profile

Jan-29-03

4/598N: Computer Networks

18

irda

- Founded in 1993
- Short range, point-to-point, low cost infra-red based
- Speeds from 9600b to 16Mb
- Great non-cable device
 - Ubiquitous deployment
 - 4 Mbps irda can talk to 9600 irda
- Protocols for point and shoot, exchange mp3, images, vcards, wrist watch

Jan-29-03

4/598N: Computer Networks

19

Point and shoot model

- Point to the device. If both device understand object begin shared then transparent access
- Push server – the device that provides an object exchange server. Waits passively for the client to initiate an operation
- Push client – the client that pushes the object to the push server. Push client initiates operation
- Security not an issue because of range

Jan-29-03

4/598N: Computer Networks

20

Discussion

- Available in PDA's, laptops, printers, projectors, digital cameras, wrist watches, pagers,

4/598N: Computer Networks

22

Bluetooth

- A cable replacement technology
- 1 Mb/s symbol rate
- Range 10+ meters
- Single chip radio + baseband
 - at low power & low price point

Pravin Bhagwat
@ AT&T Labs

Jan-29-03

4/598N: Computer Networks

23

Bluetooth

- Low cost, low-power radio-based cable replacement
- Related technologies
 - IrDA – Uses Infrared
 - Pros: Less governmental restrictions, lower cost, lower standby power, higher bandwidth
 - Cons: Line of sight
 - IEEE 802.11 – Same wireless band
 - Wireless LAN capability for a larger range
 - HomeRF – Wireless for data and voice
 - Data similar to 802.11, voice ADPCM

Jan-29-03

4/598N: Computer Networks

24

Value proposition of Bluetooth

Cable replacement

Internet access

Ad hoc networking

Pravin Bhagwat @ AT&T Labs

Bluetooth working group history

- February 1998: The Bluetooth SIG is formed
 - promoter company group: Ericsson, IBM, Intel, Nokia, Toshiba
- May 1998: Public announcement of the Bluetooth SIG
- July 1999: 1.0A spec (>1,500 pages) is published
- December 1999: ver. 1.0B is released
- December 1999: The promoter group increases to 9
 - 3Com, Lucent, Microsoft, Motorola
- February 2000: There are 1,800+ adopters

Pravin Bhagwat @ AT&T Labs

New applications enabled by Bluetooth

Pravin Bhagwat @ AT&T Labs

Jan-29-03 4/598N: Computer Networks 29

Synchronization

- User benefits
- Automatic synchronization of calendars, address books, business cards
- Push button synchronization
- Proximity operation

Pravin Bhagwat @ AT&T Labs

Jan-29-03 4/598N: Computer Networks 28

Cordless Headset

- User benefits
- Multiple device access
- Cordless phone benefits
- Hands free operation

Pravin Bhagwat @ AT&T Labs

Jan-29-03 4/598N: Computer Networks 29

Three-in-one phone

- At home, your phone functions as a portable phone (fixed line charge). When you're on the move, it functions as a mobile phone (cellular charge). And when your phone comes within range of another mobile phone with built-in Bluetooth wireless technology it functions as a walkie talkie (no telephony charge).
