CSE 40373: Home Work Project 2

Due 4/3/3009. Late submissions will not be accepted
Group effort

Report:

In our demonstration of Media Servers, we discussed Amazon's cloud service – EC2. More information on this service is available at http://aws.amazon.com/ec2/. Suppose you have some MPEG4 video objects that you want to stream (say for your business) and you are considering EC2 service. Write a succinct (say 1 page) report describing what your requirements will be for your media servers and on whether the terms of the service will be acceptable for your needs. The terms of the conditions are available in the URL. The URL also discusses the cost of the service. Be specific. For example, you can say that you expect your service to serve 1,000,000 customers a day at 1 GB per stream. The cost of $XXX, uptimes of YY% are acceptable for your needs.
